Energy and Telecommunications

In the main field of our interest is the sector of energy and telecommunications. For this industry we produce many supporting structures, as well as the individual fasteners. We also make assembling in our factory.

Industrial constructions

*We supply the necessary equipment for the manufacture of structural elements of industrial halls. Welding processes oversees **Chief Welder** dr inż. Tadeusz Kliszcz.*

Railway traction structures

In may 28th 2010, the **Polcynk** acquired **Technical Approval** for production of portals and individual posts of network traction no AT15-8116/2010 from the Institute of Building Technology. It is a young but rapidly developing branch of our production.

Road constructions

We are also involved in the production and delivery of components of the road barriers and whole portals, the

railings on the bridges and the overpasses for pedestrians. We deliver our products to the markets: French, German, Swedish, Czech, Slovak and Polish of course.
